(Amazon links are affiliate links).

Instructions:

Collect your supplies.

Using your Deco Foil Liquid Adhesive or Deco Foil Adhesive Pen, fill in the area to be foiled.

When using the pen, I found it easiest to get the best coverage by being at eye level and holding the pen almost upright, as pictured.

Allow the adhesive to set for 30 seconds to 1 minute.

Cut a piece of foil just a touch bigger than the area you are foiling.

Place colored side up on the area you wish to foil.

Press and rub the foil where you added the adhesive.

Remove the foil. If the foil didn't adhere to an area, just use a new area of your foil and press again.

Place your print in a frame and hang.

Notes:

If you are using the adhesive pen, it may need to be pressure set with a Cuttlebug or Sizzix machine. You could also run it through a laminator on the cold setting. It will depend on your climate as to if it will need the pressure.
